FOREWORD

One of the causes of "The High Cost of Living" is that we are paying "The Trusts" exorbitant prices for a great many things which we ought to provide for ourselves. We are eating all sorts of food out of tin cans, "Embalmed" with all sorts of dangerous chemicals, that we ought to raise in our own gardens.

"The Remedy." Plant a garden, and know the joy of seeing things grow. Have the satisfaction of eating clean, fresh vegetables, free from benzoates and sulphates and uncontaminated by the reek and filth of the market place.

Let us supply "The Best Seeds That Grow" and help you with the many useful suggestions you will find in this modest, compact and convenient little catalogue, and with any special advice that is yours for the asking.

We have been selling seeds to three generations of critical growers, and value the reputation we have earned for good seeds and square dealing above everything else.

Bell's Selected Flower Seeds
Our Flower Seeds are grown expressly for us by the most expert and reliable growers in Europe, and the varieties offered are the result of many years of careful selection with the purpose of giving our customers the newest, choicest and best.

HOW TO SUCCEED WITH FLOWER SEEDS

Many of the failures with flower seeds are due to a lack of proper care and conditions, and while we have not space to give detailed directions for every species and variety, we offer the following few suggestions, which will prove helpful to amateurs.

All flower seeds which need to be started indoors, should be sown in shallow boxes or pans not more than two inches deep, which should be filled to the depth of about one inch with coarse cinders or gravel to provide drainage, above this place an inch of finely sifted soil, composed of about two-thirds of light, rich, garden loam and one-third fine sand. Press the dirt firm and even and water thoroughly the day before sowing the seed. Scatter seeds thinly and evenly over the surface, and cover them about one-eighth of an inch with fine sifted loam. Cover the box with a pane of glass or one or two thicknesses of newspaper, and keep at a uniform temperature of about 70 degrees. Water them carefully and regularly with a view of keeping the dirt always moist, but never wet.

DON'T BE DISCOURAGED IF PLANTS ARE SLOW IN GERMINATING, FOR SOME OF THE MORE DELICATE SEEDS REQUIRE TWO OR THREE WEEKS. AFTER THE PLANTS ARE STARTED REMOVE THE GLASS OR PAPER AND GRADUALLY ACCLIMATE THE SMALL PLANTS TO STRONG SUNLIGHT. DO NOT TRY TO TRANSPLANT THEM UNTIL SETTLED WARM WEATHER, BUT THEY CAN BE HARDENED BY PLACING OUT OF DOORS DURING THE WARM PART OF THE DAY.

The hardier annuals and perennials that are to be sown out of doors need no particular care except to see that the ground is thoroughly cultivated and pulverized before sowing the seed, and kept free from weeds and pests after the plants start.

Nothing is gained by trying to transplant seed before the ground is warm and dry, as many seeds of excellent vitality will rot and die in cold, wet ground.

The amateur can get much valuable assistance from any of the popular books on floriculture, among which there is none better than "Home Floriculture," by Eben E. Rexford, which is described among other books in the back of this catalog.

GENERAL CLASSIFICATION OF PLANTS

Annuals are plants which bloom, produce seeds and die in a single season.

Biennials produce plants the first season, which bloom the second season, and then die.

Perennials produce plants which sometimes bloom the first season, but more often the second, and continue living and bloom yearly after year.

Bedding and House Plants

IMPORTANT NOTICE. The plants which you order will be sent you when the weather conditions are most favorable. They may be sent in different packages at different times. If not received as soon as you expect do not make enquiries about them earlier than April 15th. You will surely get them in good season. The size of plants furnished by us is given on the catalogue as accurately as can be advantageously sent by mail. Roses and greenhouse plants are strong thift plants from two and one half inch pots. The shrubs and climbing plants are selected from hardy, thrifty one year old stock, and in our experience bear transportation and setting better than older stock.

Climbing vines and flowering shrubs must be sent out while in a dormant condition, before they begin to leaf out. Orders for these items therefore should reach us not later than April 10th. Orders for roses and greenhouse plants can be filled up to May 20th.
